

User Manual

This is a user manual of the Album Finder Application. This application helps to find an Album with its price, rating and all the other details. The import data text file button imports the data of a text file to the table. The user manual button opens the user manual file. All the details of the album can be filled in the text fields. The delete button deletes the selected row from the table, the update button updates the data of the selected row from the table and the add button adds the data to the selected row. Then we can search the album by its price or the genre by using the dropdown menu and entering the price.
